SUMMARY

DevOps focused Software Engineer with 3.5+ years of total experience, including nearly 2 years in DevOps and infrastructure (infrastructure automation, CI/CD, cloud infrastructure, containerization, monitoring, security and application delivery), preceded by backend software development with Java and Spring Boot. Currently running infrastructure, automation and security for a self hosted, multi server environment at HomeIT System. Hands on with AWS (EC2, VPC, ELB, Route 53, RDS, S3, IAM), Linux, Ansible, Jenkins, GitHub Actions, Docker, Docker Compose, Bash shell scripting, Python, Proxmox VE virtualisation, monitoring and security tooling. Experienced in automating infrastructure provisioning as Infrastructure as Code, building reliable CI/CD pipelines, backup and disaster recovery, infrastructure cost optimisation, troubleshooting deployments and supporting development teams with production ready platforms.

EDUCATION

Uva Wellassa University of Sri Lanka 2019 – 2023
B.Sc. (Hons) in Computer Science and Technology

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, VPC, ELB, Route 53, RDS, S3, IAM), Hetzner Cloud
Virtualisation: Proxmox VE (HA cluster, VMs, LXC), Proxmox Backup Server, Kata Containers (microVMs)
CI/CD & Version Control: Jenkins, GitHub Actions, Git, Nexus, SonarQube
Infrastructure as Code & Automation: Ansible, Bash (shell scripting), Python
Containers & Orchestration: Docker, Docker Compose, Kubernetes (working knowledge), Dokploy (PaaS)
Monitoring & Observability: Checkmk, Prometheus, Grafana, Sentry, Matomo
Security: Wazuh SIEM, CrowdSec, PatchMon, Cloudflare Zero Trust, per-user ACL-based access control
Networking & Access: Nginx, HAProxy, Traefik, pfSense, AdGuard, VLANs, TLS, Headscale/Tailscale
Operating Systems: Linux (Debian, Ubuntu)
Development: Java, Spring Boot, Node.js, Express.js, Python, Apache Kafka, React.js, Next.js, TypeScript
Databases: PostgreSQL, MySQL, MongoDB, Redis
AI-Assisted Development: Claude, Gemini, OpenCode

PROFESSIONAL EXPERIENCE

Software Engineer (DevOps & Infrastructure), HomeIT System Jan 2025 - Present

- Automated provisioning of 25+ VMs and LXC containers across Proxmox and Hetzner Cloud using Ansible, cutting server setup time from roughly 2 hours to 15 minutes and running weekly Ansible-driven patch cycles with no manual overhead.
- Automated AWS infrastructure with Ansible, provisioning EC2 instances inside a VPC, RDS databases, S3 storage and IAM least privilege access for consistent, repeatable deployments without manual console setup.
- Built a two node Proxmox HA cluster on Hetzner dedicated hardware with encrypted off-site backups via Proxmox Backup Server to NAS storage, using incremental backups that transfer only changed data for faster backup windows, lower storage use and quick restores, reducing infrastructure spend by 65% versus equivalent managed cloud while holding 99% uptime.
- Engineered a Docker based CI/CD pipeline publishing images to Nexus and deploying through Dokploy with Docker Compose, using Jenkins agents to automate build and test cycles and cutting deployment time from 30-40 minutes to 5-10 minutes.
- Hardened and monitored 10+ production hosts with Checkmk, Wazuh SIEM, CrowdSec and PatchMon, adding

HTTP health checks that push Google Chat alerts within 5 minutes of any client site returning a non-200 response.
- Architected external and internal network access with pfSense, Cloudflare, Nginx and AdGuard, publishing client domains securely while restricting internal tooling to the organisation network over Headscale/Tailscale with per-user ACLs.
- Deployed and maintained self hosted open source business applications as Docker containers through Dokploy, publishing each on its own subdomain behind HAProxy with TLS termination and Cloudflare Zero Trust for access control.
- Contributed to securing a medical practice's infrastructure with isolated VLANs, default deny firewall rules and Ansible automation across Proxmox, VMs and macOS, producing audit-ready compliance reports.
- Deployed Wazuh SIEM behind Traefik, isolated internet-facing services in Kata Containers microVMs and built a Node.js operations dashboard for security alerts and patch status.
- Integrated Sentry error tracking and performance monitoring into a production Next.js client website and rolled out self hosted Matomo for first party analytics across client sites.
- Developed secure Spring Boot APIs using RSA public/private key encryption for end-to-end encrypted file transfer to Hetzner S3, backed by PostgreSQL with Flyway-managed migrations, Redis caching and Apache Kafka for asynchronous processing.

Associate Software Engineer, CodeLantic Pvt Ltd Oct 2023 - Jan 2025

- Built and maintained Java 17 and Spring Boot microservices across 3 projects, including a retail operations platform and a real estate transactions platform.
- Decomposed a monolithic application into independent, separately deployable microservices with Feign Client, WebClient and API Gateway, validating feature parity through API level and full system testing before cutover.
- Managed MySQL schemas through Flyway migrations alongside MongoDB models and delivered secure APIs with Spring Security, including AWS S3 upload/download for multimedia content.

Software Engineer - Trainee, CodeLantic Pvt Ltd Mar 2023 - Sep 2023

- Developed REST APIs with Spring Boot and Java 8 for a fintech application, implementing backend validation with Hibernate Validator and verifying endpoints through Postman.
- Wrote Mockito and JUnit5 unit tests achieving 80%+ code coverage and resolved code quality issues to pass SonarQube quality gates, plus Selenium scripts for full UI flow testing.

PROJECTS

Team Weekly Reporting & Review Platform Java 21, Spring Boot, React, Docker, Jenkins

- Built a full stack weekly reporting platform with a structured submit review approve workflow, project and user administration, role-based access control, immutable report versioning, manager analytics and an AI chat assistant with read-only tools inheriting application access rules.
- Containerised with Docker, published to a private Docker Hub registry via a Jenkins CI/CD pipeline, with SonarQube static analysis passing the quality gate.

Ansible GitHub CI/CD Automation Ansible, Jenkins, SonarQube, Java, Docker

- Built end-to-end DevOps automation with Ansible playbooks that create a Java application, generate the GitHub repository, push code, create and trigger the Jenkins pipeline, and run SonarQube analysis with results displayed.
- Turned a multi-step manual project setup into a single repeatable playbook run, giving every new project the same Git, CI/CD and code-quality setup from the start.

Chat Application using DragonFlyDB Spring Boot, WebSocket, DragonFlyDB, Docker, Jenkins, AWS EC2

- Built a real-time chat application with Spring Boot and WebSocket using DragonFlyDB (Redis compatible) for in-memory message handling.
- Containerised the application with Docker and automated build, SonarQube code analysis and deployment to AWS EC2 through a Jenkins CI/CD pipeline.

Point of Sale & E-Commerce Platform React, TypeScript, Express, PostgreSQL, Nginx, Cloudflare

- Built a production POS and e-commerce platform with role-based administration for sales, inventory, purchasing, expenses, reporting and a public customer storefront.
- Deployed to a self-managed VPS behind Nginx and Cloudflare.
